

Tanmay Vij

(+91) 9871596308 · Bangalore, India · tanmayvij8@gmail.com

PROFESSIONAL SUMMARY

Engineering leader and cloud architect with 6 years of experience designing and scaling multi-tenant SaaS platforms, including 5 years of technical leadership with end-to-end ownership of architecture, delivery, client engagement, and team mentorship. Deep expertise in Java Spring Boot, distributed microservices, event-driven systems, and AWS serverless and cloud-native architectures. Proven track record modernizing legacy platforms into high-performance, resilient services while driving architectural strategy, sprint execution, and production reliability as the primary technical counterpart to enterprise clients.

EXPERIENCE

Lead Software Engineer — Platform Architecture & Delivery

May 2021 – Present

Softobotics Technologies | Bangalore, India

Head technical owner across multiple enterprise SaaS engagements, accountable for architecture decisions, delivery roadmaps, client relationships, hiring-level mentorship, and production operations. Primary stack: Java Spring Boot, .NET Core, AWS.

Opus Bilprovning — *global vehicle inspection platform*

- Directed end-to-end modernization of legacy monolithic applications into modular REST APIs, enabling a scalable cloud-ready backend serving a nationwide network of inspection stations with an Angular frontend.
- Served as primary technical point of contact for the client, owning requirements, sprint planning, mentoring, and ad-hoc delivery while aligning engineering output with business priorities.
- Architected distributed data-processing workflows and optimized complex SQL Server queries, cutting latency in high-throughput inspection and reporting pipelines.
- Executed migration from SQL Server mirroring to Always On Availability Groups, materially improving database availability and fault tolerance.
- Led production incident response and root-cause analysis with minimal downtime, and drove proactive platform stability and observability improvements.
- Partnered with DevOps to redesign environment architecture, server configuration, and deployment workflows, improving release reliability and operational efficiency.

Repositree — *multi-tenant commercial real estate SaaS*

- Re-architected a tightly coupled hybrid system (monolith plus fragmented microservices) into a clean, modular Spring Microservices backend, improving maintainability, scalability, and developer velocity.
- Designed multi-tenant architecture with strict data isolation, access control, and tenant-aware workflows with clean separation of concerns across services.
- Optimized database schemas and queries across a distributed system, reducing redundancy and improving reliability for multiple enterprise tenants.

Catering Rewards — *high-volume restaurant loyalty platform*

- Built and deployed Spring microservices on AWS (SQS, Cloud Map, Terraform) supporting asynchronous, high-throughput order processing.
- Implemented tenant-aware authentication and role-based access control (RBAC), ensuring secure data isolation across partners.
- Designed transactional workflows including a double-entry ledger system, guaranteeing ACID-compliant financial data integrity and reliable reconciliation.

Foundercrate — *startup fundraising and investor CRM platform*

- Built an investor CRM with Kanban workflows from scratch, and a bulk emailing engine on AWS SQS and SES with throttle-aware queue processing to operate within SES daily send limits.

- Optimized investor database queries over nested tables exceeding 200K records, and engineered nested AWS CloudFormation stacks to work around the 500-resource hard limit.

Co-Founder & Director

Oct 2020 – May 2021

RePrice Technologies | India

- Designed the full system architecture and led development and deployment of backend APIs and Android/iOS mobile apps (Java, Firebase, React Native).
- Integrated third-party pricing APIs across multiple service providers; scaled the platform to 1,000+ users/month within 6 weeks of launch.
- Owned product strategy, customer feedback loops, and business operations end to end in a fast-paced startup environment.

Full Stack Engineer & Cloud Architect

Apr 2020 – Apr 2021

Independent Consultant | Remote

- Designed real-time chat and meeting modules (WebSockets, WebRTC) for a Next.js productivity platform, engineered for reliability in low-bandwidth environments; built Node.js backends supporting thousands of concurrent users with minimal latency.
- Automated VM provisioning and configuration on DigitalOcean with infrastructure-as-code templates, enabling seamless tenant onboarding.
- Built a WebSocket-based research survey chat platform with dynamic participant assignment, chatbot integrations, Qualtrics integration, and analytics pipelines for engagement tracking and data export.

SKILLS

Languages: Java, C#, TypeScript, JavaScript, SQL

Frameworks: Spring Boot, Spring Microservices, .NET 8, Node.js, React, Angular

Architecture: Microservices, Event-Driven Architecture, Multi-Tenant SaaS, Distributed Systems, Serverless, REST & GraphQL API Design, Domain-Driven Design

Message Brokers: Apache Kafka, RabbitMQ, AWS SQS/SES, Pub/Sub Messaging

Databases: SQL Server, MySQL, MongoDB, Redis, Elasticsearch

Cloud & Infrastructure: AWS (Lambda, SQS, SES, CloudFormation, Cloud Map, ECS), GCP, Docker, Kubernetes, Terraform, Infrastructure as Code, CI/CD

Practices: Scalability, High Availability, Security, Monitoring & Observability, Incident Response, Agile/Sprint Leadership

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (Aug 2025)
- Deep Learning Certification — One Fourth Labs, in collaboration with IIT Madras (Mar 2020)

ACHIEVEMENTS & OPEN SOURCE

- Winner, Facebook Artificial Intelligence Hackathon (2019).
- Winner, National Cyber Security Fest @ IIT Kharagpur (2017).
- DigitalOcean Hacktoberfest contributor (2020); active package publisher and contributor on NPM.

EDUCATION

B.Tech in Computer Science and Engineering

Amity University, Noida

LANGUAGES SPOKEN

English, French, Spanish
